Educational Researcher publishes scholarly articles that are of general significance to the education research community and that come from a wide range of areas of education research and related disciplines. Published nine times a year, ER aims to make major programmatic research and new findings of broad importance widely accessible.

- **Feature Articles** present important new research results of broad significance. Feature articles should include an abstract, an introductory paragraph, up to five figures or tables, and up to 40 references, with text totaling no more than 5,000 words. Significant feature articles may be somewhat longer than 5,000 words at the discretion of the editors. Methods need to be sufficiently presented in the research article to warrant results, but information should usually be included in supplementary online material to further support the paper’s conclusions. All Feature Articles undergo peer review; they may be solicited or unsolicited.

- **Reviews/Essays** describe new developments of broad significance and highlight unresolved questions and future directions. Reviews/Essays are research-based and aim to convey new developments in the state of the knowledge and its implications, whether theoretical, empirical, or methodological. Reviews/Essays should include an abstract, an introduction that outlines the main point, brief subheadings, and up to 40 references, with text totaling no more than 4,000 words. All Reviews/Essays undergo peer review; they may be solicited or unsolicited.

- **Briefs** are brief analyses focusing on a specific topic or question using new data or existing databases (e.g., available from the National Center for Education Statistics). Briefs should include a brief introduction of the issue or question, a brief discussion of the data, up to two figures or tables, and a maximum six references, with text totaling no more than 1,000 words. Titles should be no more than eight words in length. Authors should also submit an abstract of 100 words or less, which will appear online only. Methods (quantitative and/or qualitative) should be included in supporting online material. Manuscripts are peer-reviewed in the usual manner.

- **Technical Comments** discuss articles published in ER within the previous six months. Technical Comments should have no more than two figures or tables; authors should submit a brief abstract of no more than 50 words to accompany their comment, with text totaling no more than 1,000 words. The authors of the original ER article are given an opportunity to reply. Comments and responses are peer-reviewed and edited as needed. The full text of comments and responses is published online only; abstracts of the discussions appear in the Letters section of the print journal.

- **Policy Forum** presents issues related to the intersections between education research and policy. Essays should be 1,000-2,000 words long plus 1-2 figures. Submissions may be solicited or unsolicited.

- **Letters** discuss material published in ER in the last three months or issues of general interest. Letters may total up to 300 words.

- **Books et al.** presents reviews of current books, multimedia, exhibitions, and films of interest to ER readers. They may total up to 1,000 words. Submissions are solicited.
